RE: Excavation/Filling Permit Application Waiver Request
10 & 36 Main Street
Monroe, Connecticut 06468
Project Number: 2008001

Dear Commission Members:

On behalf of 10 & 36 Main Street LLC, we respectfully request waivers for the proposed Excavation/Filling Permit Application for proposed construction activities located at 10 & 36 Main Street, Monroe, Connecticut. The project proposes earthwork operations and the placement of 167,790 CY of fill material on the property.

In accordance with section §6.4.23 of the Monroe Zoning Regulations, we are requesting waivers for the following regulations:

- Per section §6.4.9.C – No change in contour shall be made within twenty-five (25) feet of any property line.

  We are requesting a waiver from this section as the application involves two parcels which share a common property line, of which grading is proposed to occur across in order to join the two parcels together and eliminate a large grade change along the property line.

- Per section §6.4.9.D – No artificial slope greater than fourteen degrees (14°) to the horizontal (or maximum four feet horizontal to one foot vertical) shall be created within fifty feet of any property line.

  This waiver is requested as part of the project's future site development plan and construction preparation. This process will allow the excavation and fill within the project site to occur only once during a limited short duration basis, instead of multiple phases during the construction process.

- Per section §6.4.9.P – All permitted such activities regardless of permitted location shall not include, permit or involve materials from offsite locations.

  We are requesting the commission grant a waiver to process (Sorting, grading, crushing) materials from offsite locations in order to place those materials onsite.

These waivers are requested as part of the project's future site development plan and construction preparation. These waivers will allow the excavation and fill within the project site to progress smoothly and to adequately prepare the site for future development.

Please let us know if you have any questions regarding the waivers requested. We look forward to working with you in the processing of this application.

Respectfully,

Re: Wetland and Watercourse Delineation
10 & 36 Main Street, Monroe, Connecticut

Dear Mr. Pawlowski:

As requested, we visited the referenced properties to determine the presence or absence of wetlands and/or watercourses, to demarcate (flag) the boundaries of wetlands and watercourses identified, and to identify onsite soil types. This letter includes the methods and results of our investigation, which we completed today, April 22, 2021. In summary, one inland wetland system was identified and delineated. The system, which is located in the eastern portion of 10 Main Street, is a woodland wetland.

Regulatory Definitions

The Inland Wetlands and Watercourses Act (Connecticut General Statutes §22a-38) defines inland wetlands as "land, including submerged land...which consists of any soil types designated as poorly drained, very poorly drained, alluvial, and floodplain." Watercourses are defined in the act as "rivers, streams, brooks, waterways, lakes, ponds, marshes, swamps, bogs and all other bodies of water, natural or artificial, vernal or intermittent, public or private, which are contained within, flow through or border upon the state or any portion thereof." The Act defines Intermittent Watercourses as having a defined permanent channel and bank and the occurrence of two or more of the following characteristics: A) evidence of scour or deposits of recent alluvium or detritus, B) the presence of standing or flowing water for a duration longer than a particular storm incident, and C) the presence of hydrophytic vegetation.

Methodology

A second order soil survey in accordance with the principles and practices noted in the USDA publication *Soil Survey Manual* (1993) was completed at the subject site. The classification system of

195 TUNXIS HILL CUTOFF S
FAIRFIELD, CT 06825
PHONE: 203 366 0588
FAX: 203 366 0067
www.wkassociates.net

the National Cooperative Soil Survey was used in this investigation. Soil map units identified at the project site generally correspond to those included in the *Soil Survey of the State of Connecticut* (USDA 2005).

Wetland determinations were completed based on the presence of poorly drained, very poorly drained, alluvial, or floodplain soils. Soil types were identified by observation of soil morphology (soil texture, color, structure, etc.). To observe the morphology of the property's soils, test pits and/or borings (maximum depth of two feet) were completed at the site.

Intermittent watercourse determinations were made based on the presence of a defined permanent channel and bank and the occurrence of two or more of the following characteristics: A) evidence of scour or deposits of recent alluvium or detritus, B) the presence of standing or flowing water for a duration longer than a particular storm incident, and C) the presence of hydrophytic vegetation.

Wetland boundaries were demarcated (flagged) with pink surveyor's tape (hung from vegetation) or small flags (on wire stakes) labeled "William Kenny Associates" that are generally spaced a maximum of every 50 feet. Complete boundaries are located along the lines that connect these sequentially numbered flags. The wetland boundaries are subject to change until adopted by local, state, or federal regulatory agencies.

Results

The approximate 14.2-acre commercial properties are located at 10 and 36 Main Street in Monroe, Connecticut. Main Street borders the western property boundary and Victoria Drive borders the northern property boundary. Property improvements include asphalt drives and parking areas. The vegetative cover in the eastern portion of the properties is a broadleaved deciduous woodland. An invasive dominated meadow is present in the western and central portions of the properties.

One inland wetland system was identified and delineated. The system, which is located in the eastern portion of 10 Main Street, is a woodland wetland. Wetland soils are primarily poorly drained and very poorly drained and formed from glacial till deposits or formed from alluvial deposits. The approximate location of the system is shown on the attached map. The boundary of the system was marked at the site with flags numbered 1 to 34.

Six soil map units were identified on the property (two wetland and four upland). Each map unit represents a specific area on the landscape and consists of one or more soils for which the unit is named. Other soils (inclusions that are generally too small to be delineated separately) may account for 10 to 15 percent of each map unit. The mapped units are identified in the following table by name and symbol and typical characteristics (parent material, drainage class, high water table, depth to bedrock, and slope). These characteristics are generally the primary characteristics to be considered in land use planning and management. A description of each characteristic and their land use implications follows the table. A complete description of each soil map unit can be found in the *Soil Survey of the State of Connecticut* (USDA 2005), and at *https://soilseries.sc.egov.usda.gov/osdname.aspx.* On the day of the review, the upland soil was moist and the wetland soil was wet to inundated. The sky was clear and air temperatures were in the 50's ^{o} F.

Parent material is the unconsolidated organic and mineral material in which soil forms. Soil inherits characteristics, such as mineralogy and texture, from its parent material. Glacial till is unsorted, nonstratified glacial drift consisting of clay, silt, sand, and boulders transported and deposited by glacial ice. Glacial outwash consists of gravel, sand, and silt, which are commonly stratified and deposited by glacial melt water. Alluvium is material such as sand, silt, or clay, deposited on land by streams. Organic deposits consist of decomposed plant and animal parts.

A soil's texture affects the ease of digging, filling, and compacting and the permeability of a soil. Generally sand and gravel soils, such as outwash soils, have higher permeability rates than most glacial till soils. Soil permeability affects the cost to design and construct subsurface sanitary disposal facilities and, if too slow or too fast, may preclude their use. Outwash soils are generally excellent sources of natural aggregates (sand and gravel) suitable for commercial use, such as construction sub base material. Organic layers in soils can cause movement of structural footings. Compacted glacial till layers make excavating more difficult and may preclude the use of subsurface sanitary disposal systems or increase their design and construction costs if fill material is required.

Generally, soils with steeper slopes increase construction costs, increase the potential for erosion and sedimentation impacts, and reduce the feasibility of locating subsurface sanitary disposal facilities.

Drainage class refers to the frequency and duration of periods of soil saturation or partial saturation during soil formation. Seven classes of natural drainage classes exist. They range from excessively drained, where water is removed from the soil very rapidly, to very poorly drained, where water is removed so slowly that free water remains at or near the soil surface during most of the growing season. Soil drainage affects the type and growth of plants found in an area. When landscaping or gardening, drainage class information can be used to assure that proposed plants are adapted to existing drainage conditions or that necessary alterations to drainage conditions (irrigation or drainage systems) are provided to assure plant survival.

High water table is the highest level of a saturated zone in the soil in most years. The water table can affect the timing of excavations; the ease of excavating, constructing, and grading; and the supporting capacity of the soil. Shallow water tables may preclude the use of subsurface sanitary disposal systems or increase design and construction costs if fill material is required.

The depth to bedrock refers to the depth to fixed rock. Bedrock depth affects the ease and cost of construction, such as digging, filling, compacting, and planting. Shallow depth bedrock may preclude the use of subsurface sanitary disposal systems or increase design and construction costs if fill material is required.

Conclusions

Today, we investigated the properties at 10 and 36 Main Street in Monroe, Connecticut and identified and delineated one inland wetland system. Thank you for the opportunity to assist you. If you should have any questions or comments, please do not hesitate to contact us.

ENGINEERING MEMORANDUM

To: Town of Monroe, Application Review Team

From: Kevin Solli, P.E. / Solli Engineering

Subject: Excavation / Filling Permit Application
10 & 36 Main Street, Monroe, Connecticut 06468

Date: July 26, 2021

CC: Arnold Karp / Karp Associates, Inc.

Solli Engineering, LLC has prepared this Memorandum to provide an analysis of the earthwork, zoning compliance, grading design, soil erosion control measures and stormwater management associated with the proposed excavation/filling activity located at 10 & 36 Main Street in Monroe, Connecticut. The design is in compliance with applicable Town of Monroe regulations as well as other applicable state and federal requirements. The following summarizes the proposed project activities.

Property Description:

The project site is comprised of 10 & 36 Main Street in Monroe, Connecticut. The total site is approximately 14.35 acres, comprised of 5.22 acres within 10 Main Street and 9.13 acres within 36 Main Street. The site is bound by Main Street (Route 25) to the west, Victoria Drive to the north, and commercial developed land to the east and south. Both properties are owned by 10 & 36 Main Street LLC and zoned Business District 2 (B-2). See Figure 1, Site Location Map, for a depiction of the project location.

The project site was visited by a certified soil scientist from William Kenny Associates, LLC on April 22, 2021. William Kenny Associates determined that one inland wetland system was identified and delineated. The system, which is located in the eastern portion of 10 Main Street, is a woodland wetland. No wetland soils or watercourses were found within the property of 36 Main Street. See the Wetland Delineation Report, prepared by William Kenny Associates, LLC for additional detail on the site wetlands assessment.

Property History:

Prior to 1984, 36 Main Street consisted of land totaling approximately 2.35 acres and was bounded by Main Street (Route 25) to the west, a children's camp to the north, a former railway to the east and 10 Main Street to the south. A residential dwelling occupied this property at that time but was later demolished. In 1984, a land transfer of the railway parcel and a portion of the children's camp site were deeded over to 36 Main Street creating the current 5.4-acre parcel. This land was occupied by a dwelling unit and driveway associated with the camp site; these site features

have since been demolished. The site has remained vacant since these features were demolished. Over the years, the site has grown over with woody vegetation, consisting of evergreens and deciduous trees.

The property at 10 Main Street was previously occupied by a ±34,000 SF building and an additional ±11,567 warehouse. The buildings were owned and operated by Vishay Intertechnology, Inc. the buildings were demolished at some time in 2013, and the site has remained vacant since that time.

Project Narrative:

The project proposes to import approximately 167,790 cubic yards of fill material from various sites to 10 & 36 Main Street, to fill to an average elevation of approximately 328 feet. The project proposes to place fill over an area on the property, which is subject to an environmental land use restriction, while the balance of the fill is proposed to support future site development. A substantial portion of the fill will be sourced from the property of 127 Main Street as part of the site development project approved by the Town of Monroe Inland Wetlands and Planning & Zoning Commissions. The project site can be accessed off Main Street (Route 25), which will serve as the main site entrance. Temporary construction fence is to be placed along Main Street. See the Cut/Fill Analysis Plan, Figure 7, for additional details.

The soil erosion and sediment control measures proposed for the filling activity have been designed in accordance with the 2002 Connecticut Guidelines for Soil Erosion and Sediment Control. The soil erosion and sediment control measures proposed as part of this project include mulch berms, geotextile silt fences, stone check dams, temporary diversion swales, construction entrances, dust control measures, riprap stabilization, silt sack inlet protection for existing drainage features, and a sediment basin. During construction, this basin will detain sediment-laden runoff from contributing drainage areas. The sediment basin is proposed in a low-lying area and has been sized to provide a minimum storage as required per the 2002 Connecticut Guidelines for Soil Erosion and Sediment Control. Sediment Basin #1 is located at the northeastern end of the property. See plan Sheet 2.21, Grading & Soil Erosion Control Plan for more detail on the soil erosion and sediment control measures.

At the completion of the filling operation, the entire limit of disturbance will be seeded to provide stabilization and erosion control as well as provide improved curve numbers and time of concentrations compared to that of existing conditions, decreasing peak flows. At the completion of the project, the sediment will be removed from the basin and the sediment basin will be seeded and maintained to provide additional storm water detention until future potential development commences. A progress reporting form has also been prepared for the project and can be found in Appendix C.

Drainage Analysis:

The stormwater management plan and design for 10 & 36 Main Street is intended to be in compliance with the 2004 Connecticut Stormwater Quality Manual, while taking prevailing site conditions and practical considerations into account.

Stormwater runoff analysis, for both existing and proposed conditions, was performed using the software package Hydroflow Hydrograph Extension. This software uses computer implementation of the SCS-TR-55 methodology to compute volumes and rates of runoff. The watershed area, rainfall depths and intensity, curve number and time of concentration are factors that influence the computed results and are shown in the Hydrology Report in Appendix B.

Rainfall depths were taken from NOAA's National Weather Service Atlas 14, Point Precipitation Frequency Estimates and were used for calculating the volumes and rates of runoff for this project. The depths are listed in Table 1 below:

Table 1: Rainfall Data

Return Period	24-hr Rainfall Depth (in)
2-year	3.56
5-year	4.63
10-year	5.51
25-year	6.72
50-year	7.62
100-year	8.60

Hydraflow Hydrographs Extension automatically computes the rainfall intensity from its own IDF curves when the rainfall intensity data is provided. Table 2 shows the data that was used to generate the IDF curves. This information was taken from the NOAA's National Weather Service Atlas 14, Point Precipitation Frequency Estimates.

Existing Hydrology:

According to NRCS Soil Survey Geographic database for the State of Connecticut, the majority of the site is comprised of Canton and Charlton soils with 15 to 25 percent slopes. These soils have a hydrologic soil group rating of B. See Figure 3, Soil Survey Map, in Appendix A for more detail regarding soil boundaries.

Approximately 14.85 acres were analyzed for stormwater management purposes. Based on existing drainage patterns, the 14.85-acre area was considered one existing drainage area, labeled Existing Drainage Area 1 (EDA-1). The approximate location and delineation of this drainage area can be seen on Sheet DA-1, Existing Drainage Area Map, found in Appendix B.

EDA-1 has a contributing area of approximately 14.85 acres. This area encompasses the majority of the site starting at the crown within Main Street (Route 25) and reaching all the way east until the edge of the existing wetlands. The majority of runoff from EDA-1 flows east, overland, into the existing wetlands onsite. Pre-existing conditions were considered in the analysis, as 36 Main Street was previously comprised of mostly woods.

Characteristics of this drainage area is summarized in Table 3.

Table 3: Existing Drainage Area Characteristics

Drainage Area	Area (Acres)	Curve Number (CN)	Time of Concentration (Minutes)
EDA-1	14.71	72	17.5

Existing peak flows and volumes of runoff for all analyzed storm-events are summarized in Table 3. Calculations for the existing hydrology can be found in Appendix B.

Table 4: Existing Peak Flows

Drainage Area	Peak Flow (cfs)					
	2-yr	5-yr	10-yr	25-yr	50-yr	100-yr

Proposed Hydrology:

The proposed grading of the excavation/fill activity consists of drainage areas that are of similar patterns to existing contributing areas, within the 14.85 acres analyzed. Based on the proposed drainage patterns, the 14.85-acre area was divided into three (3) contributing drainage areas, labeled Proposed Drainage Area 1A (PDA-1A), Proposed Drainage Area 1B (PDA-1B) and Proposed Drainage Area 1C (PDA-1C). The approximate location and delineation of these drainage areas can be seen on Sheet DA-2, Proposed Drainage Area Map, found in Appendix B.

PDA-1A has a contributing area of approximately 12.03 acres. This encompasses the majority of the site covering from Route 25 all the way to the proposed Stormwater Basin #1. The majority of runoff from PDA-1A flows east, overland, into Stormwater Basin #1 located to the west of the existing wetlands area. PDA-1A is proposed to be seeded and established in the finished condition.

PDA-1B has a contributing area of approximately 1.81 acres. This area is comprised of southern end of the property, including grass and stone lined swales. Outside of the swales and existing woodlands, the area is to be seeded and established in the finished condition. Runoff from PDA-1B will travel east, overland, before entering the proposed swales and discharging into the existing wetlands along the eastern property line.

PDA-1C has a contributing area of approximately 1.01 acres. This area is comprised of the land directly to the west of the existing wetlands, most of which is existing woods that is to remain untouched. Runoff from PDA-1C will travel overland before reaching the existing wetlands onsite.

Characteristics of these drainage areas are summarized in Table 5. A map depicting proposed drainage areas can be found in Appendix B.

Drainage Area	Area (Acres)	Curve Number (CN)	Time of Concentration (Minutes)
PDA-1A	12.03	61	26.6
PDA-1B	1.81	58	10.5
PDA-1C	1.01	47	10.8

Proposed peak flows and volumes for all analyzed storms are summarized in Table 5. Calculations for the proposed hydrology can be found in Appendix C.

In an effort to improve the quality of the stormwater discharged from the site, the project will retain the water quality volume within the proposed Stormwater Quality Basin (Basin #1). Basin #1 will also provide additional storage for future development plans while as reducing the peak rate of runoff during the proposed excavation and filling activities. The basin is designed to provide a total storage capacity of approximately 26,615 cubic feet at a peak elevation of 298.82 during the 100-year storm to maximize the amount of detention on the site, with a required water quality volume of 3,708 cubic feet, and a provided stormwater quality volume of 3,885 cubic feet. With a top elevation of 300.00 for the proposed basin and a peak elevation of 298.82 during the 100-year storm, the basin provides a minimum of 1' of freeboard. Stormwater is discharged from the water quality basin via an outlet control structure (OCS-1). The outlet control structure is a Connecticut State Highway Department, "C-L" top, standard catch basin configuration in which the top of frame acts as a weir. The outlet control structure features an 18" orifice with an invert of 294.50 and discharges through a 24" HDPE pipe to a level spreader. For more details on the configuration and drainage features of Stormwater Basin #1 and OCS-1, see Sheet 2.21, Grading & Soil Erosion Control Plan.

The proposed stormwater quality basin (Basin #1) is designed to attenuate the overall peak discharge rate for the 2-, 5-, 10-, 25-, 50-, and 100-year storm event; so that the overall proposed peak flow is less than the overall existing peak flow. The SCS TR-55 methodology was used to compute the peak discharge rates. Refer to Appendix B for calculations of the existing and proposed hydrology. The existing discharge rates and the proposed peak discharge rates, associated with the filling activities, are summarized in the table below (proposed rates are depicted in bold).

Table 6: Peak Flows Comparison

Drainage Area	Peak Flow (cfs)

PDA-1	**2.50**	**7.80**	**10.89**	**19.02**	**26.67**	**31.85**

In addition to the water quality volume provided in the stormwater quality basin, there are also two grass-lined swales proposed as a water quality measure. Both swales are proposed up-gradient of Basin #1. The swales both feature a 2' depth with a longitudinal slope of 2%.

Post-Construction Site Maintenance:

The property owner shall maintain its property at 10 & 36 Main Street, Monroe, Connecticut in accordance with this site maintenance plan, as follows, to maintain the aesthetic quality and cleanliness of the site:

- There are to be no construction activities within the wetland areas, those areas will remain undisturbed as required.
- Main Street shall be checked for potential perimeter erosion, trash, spillage, and pavement conditions during these inspections.
- The sediment traps shall be inspected bi-annually in May and November and cleaned of excessive sediment and debris.
- Maintain each construction entrance anti-tracking pads with silt fence along the edge of the pads.

Earthwork Analysis:

The proposed excavation and filling project will have slopes that range from approximately 1.0 percent within the parking area to 30-50 percent within landscaped fill slopes around the edge of the project site. Elevations will range from a high of approximately 346 feet, in the northwest corner of the site, to a low of approximate 292 feet edge of the existing wetlands along the eastern property edge. The project was designed in order to raise the grades of the site to be closer to the elevations along Main Street (Route 25) in order to support future site development. There will be a proposed filling of 183,009 CY, and a cut of 15,219 CY, resulting in a net import of 167,790 CY. The majority of the excavation/ filling activities are to take place outside of the regulated area. Within the regulated area, there will be a proposed filling of 2,029 CY, and a cut of 2,680 CY, resulting in a net export of 651 CY. No fill is to be placed within the 100-year floodplain.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

PLANS

Grading & Soil Erosion Control Plan (Sheet 2.21)
Reclamation Plan (Sheet 2.61)

EROSION CONTROL AND SEDIMENT CONTROL NOTES

1. PRIOR TO THE START OF CONSTRUCTION, A PRECONSTRUCTION MEETING WITH THE ENGINEER AND THE TOWN OF MONROE LAND USE STAFF IS REQUIRED.
2. ACTUAL LOCATIONS AND APPLICATIONS OF EROSION CONTROL DEVICES SHALL BE DETERMINED IN THE FIELD PRIOR TO THE START OF CONSTRUCTION BASED ON THE EROSION AND SEDIMENT CONTROL STRATEGY. THE STRATEGY WILL REQUIRE THE CONTRACTOR TO PROVIDE APPROPRIATE CONTROLS SUCH AS STRUCTURAL PRACTICES, MAINTENANCE, AND STABILIZATION PRACTICES ALONG WITH THE PROPER DISCHARGE OR DEWATERING OF WASTEWATERS.
3. LIMITS OF DISTURBANCE SHALL BE FLAGGED IN THE FIELD BY A LICENSED SURVEYOR AND VERIFIED PRIOR TO INITIATION OF CONSTRUCTION.
4. EROSION AND SEDIMENT CONTROL DEVICES SHALL BE INSTALLED PRIOR TO ANY FILLING. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARD AND SPECIFICATIONS OF THE STATE OF CT DEEP "2002 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL" HANDBOOK AND 2004 CONNECTICUT STORMWATER QUALITY MANUAL. CONTROL DEVICES CONTINGENT ON INSPECTION APPROVAL BY THE TOWN OF MONROE LAND USE STAFF.
5. ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED, FUNCTIONING, AND INSPECTED BY THE TOWN OF MONROE LAND USE STAFF PRIOR TO ANY SITE DISTURBANCE. ADDITIONAL MEASURES MAY BE REQUIRED DURING THE COURSE OF CONSTRUCTION AND SHALL BE IMPLEMENTED AS NEEDED. ALL SEDIMENT AND EROSION CONTROL MEASURES ARE TO BE INSPECTED PRIOR TO A HEAVY RAIN, IMMEDIATELY AFTER AND AT LEAST ONCE EACH DAY DURING EVENTS. ANY AND ALL DEFICIENCIES MUST BE CORRECTED WITHIN 24 HOURS OF DISCOVERY.
6. ALL GRADED AREAS WITH SLOPES STEEPER THAN 3 HORIZONTAL TO 1 VERTICAL SHALL BE STABILIZED WITH JUTE NETTING.
   - 6.1. LAND GRADING :
     - 6.1.1. AREAS TO BE FILLED SHALL BE CLEARED, GRUBBED AND STRIPPED OF UNSUITABLE MATERIAL.
     - 6.1.2. ALL FILLS SHALL BE COMPACTED AS REQUIRED TO REDUCE EROSION SLIPPAGE, SETTLEMENT, SUBSIDENCE, OR OTHER RELATED PROBLEMS.
     - 6.1.3. MATERIAL SHALL BE FREE OF BRUSH, RUBBISH, ROCKS LOGS, STUMPS, BUILDING DEBRIS AND OTHER UNSUITABLE MATERIALS THAT WOULD INTERFERE WITH OR PREVENT CONSTRUCTION OF SATISFACTORY FILLS.
7. WHEN ALL GRADED AREAS ARE PERMANENTLY STABILIZED. REMOVE ALL EROSION AND SEDIMENT CONTROLS. REMOVE TRAPPED SEDIMENT. AFTER ALL REMOVAL, INSPECTION TO BE PERFORMED BY TOWN OF MONROE LAND USE STAFF.
8. IT SHALL BE THE RESPONSIBILITY OF THE SITE DEVELOPMENT CONTRACTOR TO ENSURE PROPER IMPLEMENTATION OF THE SOIL EROSION AND SEDIMENT CONTROLS AS SHOWN ON THIS PLAN; AND SHALL INCLUDE BUT NOT BE LIMITED TO INSTALLATION AND MAINTENANCE OF CONTROL MEASURES, INFORMING ALL PARTIES OF SUCH REQUIREMENTS AND NOTIFICATIONS OF ANY TRANSFER OF THIS RESPONSIBILITY TO OTHER PARTIES. CONTRACTOR: STUART RUDKIN, CONTACT NUMBER: (203) 505 - 1376.
9. ANY DISTRIBUTION AREA AND PILES PLANNED TO BE LEFT MORE THAN 14 DAYS WILL HAVE TO BE SEEDED OR MULCHED IMMEDIATELY.
10. WHEN ALL SURFACES ARE PERMANENTLY STABILIZED, ANY REMAINING SEDIMENT AND EROSION CONTROL DEVICES SHALL BE REMOVED AND ALL TRAPPED SEDIMENT SHALL BE REMOVED. ALL CATCH BASIN SUMPS SHALL BE CLEANED.
11. CONSTRUCTION ACTIVITIES AT THE PROJECT SITE WILL RESULT IN EMISSIONS OF FUGITIVE DUST TO THE ATMOSPHERE. THE QUANTITY OF FUGITIVE DUST GENERATED WILL BE UNCONTROLLED BUT IS DEPENDENT UPON WEATHER CONDITIONS. FUGITIVE DUST PARTICLES HAVE A GREATER PROPENSITY TO BECOME AIRBORNE DURING DRY AND BREEZY METEOROLOGICAL CONDITIONS. CONSTRUCTION ACTIVITIES AT THE SITE WHICH WILL RESULT IN PILES AND CONSTRUCTION TRAFFIC. THE CONTRACTOR WILL IMPLEMENT THE FOLLOWING REASONABLE PRECAUTIONS DURING CONSTRUCTION TO MINIMIZE THE GENERATION OF FUGITIVE DUST:
    - 11.1. USE WATER FOR DUST CONTROL OF ACTIVE CONSTRUCTION AREAS, ACTIVE UNPAVED ROADS, AND OTHER SURFACES WHICH CAN FIVE RISE TO AIRBORNE DUST. A TYPICAL PRACTICE TO BE FOLLOWED DURING SITE GRADING WILL BE TO FOLLOW THE EARTH MOVING EQUIPMENT WITH A WATER TRUCK TO IMMEDIATE WET THE NEW DISTURBED AREA.
    - 11.2. APPLY SEED FOR A VEGETATIVE COVER ON STORAGE PILES, ESPECIALLY THOSE THAT WILL REMAIN DORMANT FOR AN EXTENDED PERIOD.
    - 11.3. THE CONTRACTOR MUST CLEAN/SWEEP DAILY ALL ON-SITE PAVED ROADS AND THAT PORTION OF ANY SURROUNDING ROADS WHICH ARE USED BY CONSTRUCTION TRAFFIC, FOR THE DURATION OF THE PROJECT.
    - 11.4. INSTITUTE A MAXIMUM ON SITE SPEED LIMIT OF 10 MILES PER HOUR.
    - 11.5. THE CONTRACTOR IS RESPONSIBLE FOR DUST CONTROL DURING THE CONSTRUCTION PROCESS. THE CONSTRUCTION MANAGER SHALL INSPECT THE SITE TO ASSURE DUST IS ADEQUATELY CONTROLLED. IF THE CONSTRUCTION MANAGER OR OWNERS REPRESENTATIVE FEELS DUST CONTROL MEASURES ARE NOT ADEQUATE THE CONTRACT SHALL BE REQUIRED TO INCREASE THESE MEASURES AS DIRECTED BY THE CONSTRUCTION MANAGER.
12. ALL CONSTRUCTION ACTIVITIES SHALL COMPLY WITH THE TOWN OF MONROE ZONING REGULATIONS.
13. A STORMWATER MANAGEMENT SYSTEM MAINTENANCE SCHEDULE SHALL BE IMPLEMENTED AND OFFICIALLY RECORDED BY THE INDIVIDUAL IDENTIFIED IN NOTE 8 ABOVE. THE SCHEDULE SHALL INCLUDE AS A MINIMUM:

    - 13.2. A WEEKLY INSPECTION OF THE SITE SHALL BE CONDUCTED FOR SURFACE DEBRIS.
    - 13.3. A MONTHLY INSPECTION OF ALL STORMWATER STRUCTURES AND OUTFALLS SHALL BE CONDUCTED FOR FLOATING OR SURFACE DEBRIS SEDIMENT.
    - 13.4. STRUCTURES AND OUTFALLS SHALL BE CLEANED OF SEDIMENT AND DEBRIS AT LEAST ONCE A YEAR DURING THE MONTH OF APRIL AND AT OTHER TIMES AS NECESSARY TO PREVENT THE DISCHARGE OF POLLUTANTS FROM STRUCTURES OR OUTFALLS.
    - 13.5. ALL DRIVES SHALL BE SWEPT CLEAN OF SAND, LITTER AND OTHER POSSIBLE POLLUTANTS AT LEAST TWICE A YEAR, ONCE BETWEEN NOVEMBER 14 AND DECEMBER 15 AND ONCE DURING THE MONTH OF APRIL AND AT OTHER TIMES AS DIRECTED BY THE TOWN OF MONROE.
    - 13.6. A STOCKPILE OF SEDIMENT AND EROSION CONTROLS SHALL BE KEPT ON SITE AT ALL TIMES. THIS WILL CONSIST OF AT LEAST 24 HAY BALES, UNDER COVER, EXTRA STONE FOR THE ANTI-TRACKING APRON, AT LEAST 100 FEET OF SILT FENCE AND 100 SQUARE YARDS OF NON-WOVEN FILTER FABRIC ADDITIONAL MEASURES MAY BE REQUIRED BY THE SITE MONITOR OR THE TOWN OF MONROE. EROSION CONTROL AND SEDIMENT CONTROL NOTES

1. PRIOR TO THE START OF CONSTRUCTION, A PRECONSTRUCTION MEETING WITH THE ENGINEER AND THE TOWN OF MONROE LAND USE STAFF IS REQUIRED.
2. ACTUAL LOCATIONS AND APPLICATIONS OF EROSION CONTROL DEVICES SHALL BE DETERMINED IN THE FIELD PRIOR TO THE START OF CONSTRUCTION BASED ON THE EROSION AND SEDIMENT CONTROL STRATEGY. THE STRATEGY WILL REQUIRE THE CONTRACTOR TO PROVIDE APPROPRIATE CONTROLS SUCH AS STRUCTURAL PRACTICES, MAINTENANCE, AND STABILIZATION PRACTICES ALONG WITH THE PROPER DISCHARGE OR DEWATERING OF WASTEWATERS.
3. LIMITS OF DISTURBANCE SHALL BE FLAGGED IN THE FIELD BY A LICENSED SURVEYOR AND VERIFIED PRIOR TO INITIATION OF CONSTRUCTION.
4. EROSION AND SEDIMENT CONTROL DEVICES SHALL BE INSTALLED PRIOR TO ANY FILLING. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARD AND SPECIFICATIONS OF THE STATE OF CT DEEP "2002 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL" HANDBOOK AND 2004 CONNECTICUT STORMWATER QUALITY MANUAL. CONTROL DEVICES CONTINGENT ON INSPECTION APPROVAL BY THE TOWN OF MONROE LAND USE STAFF.
5. ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED, FUNCTIONING, AND INSPECTED BY THE TOWN OF MONROE LAND USE STAFF PRIOR TO ANY SITE DISTURBANCE. ADDITIONAL MEASURES MAY BE REQUIRED DURING THE COURSE OF CONSTRUCTION AND SHALL BE IMPLEMENTED AS NEEDED. ALL SEDIMENT AND EROSION CONTROL MEASURES ARE TO BE INSPECTED PRIOR TO A HEAVY RAIN, IMMEDIATELY AFTER AND AT LEAST DAILY DURING PROLONGED RAIN EVENTS. ANY AND ALL DEFICIENCIES MUST BE CORRECTED WITHIN 24 HOURS OF DISCOVERY.
6. ALL GRADED AREAS WITH SLOPES STEEPER THAN 3 HORIZONTAL TO 1 VERTICAL SHALL BE STABILIZED WITH JUTE NETTING.
   - 6.1. LAND GRADING :
     - 6.1.1. AREAS TO BE FILLED SHALL BE CLEARED, GRUBBED AND STRIPPED OF UNSUITABLE MATERIAL.
     - 6.1.2. ALL FILLS SHALL BE COMPACTED AS REQUIRED TO REDUCE EROSION SLIPPAGE, SETTLEMENT, SUBSIDENCE, OR OTHER RELATED PROBLEMS.
     - 6.1.3. MATERIAL SHALL BE FREE OF BRUSH, RUBBISH, ROCKS LOGS, STUMPS, BUILDING DEBRIS AND OTHER UNSUITABLE MATERIALS THAT WOULD INTERFERE WITH OR PREVENT CONSTRUCTION OF SATISFACTORY FILLS.
7. WHEN ALL GRADED AREAS ARE PERMANENTLY STABILIZED. REMOVE ALL EROSION AND SEDIMENT CONTROLS. REMOVE TRAPPED SEDIMENT. AFTER ALL REMOVAL, INSPECTION TO BE PERFORMED BY TOWN OF MONROE LAND USE STAFF.
8. IT SHALL BE THE RESPONSIBILITY OF THE SITE DEVELOPMENT CONTRACTOR TO ENSURE PROPER IMPLEMENTATION OF THE SOIL EROSION AND SEDIMENT CONTROLS AS SHOWN ON THIS PLAN; AND SHALL INCLUDE BUT NOT BE LIMITED TO INSTALLATION AND MAINTENANCE OF CONTROL MEASURES, INFORMING ALL PARTIES OF SUCH REQUIREMENTS AND NOTIFICATIONS OF ANY TRANSFER OF THIS RESPONSIBILITY TO OTHER PARTIES. CONTRACTOR: STUART RUDKIN, CONTACT NUMBER: (203) 505 - 1376.
9. ANY DISTRIBUTION AREA AND PILES PLANNED TO BE LEFT MORE THAN 14 DAYS WILL HAVE TO BE SEEDED OR MULCHED IMMEDIATELY.
10. WHEN ALL SURFACES ARE PERMANENTLY STABILIZED, ANY REMAINING SEDIMENT AND EROSION CONTROL DEVICES SHALL BE REMOVED AND ALL TRAPPED SEDIMENT SHALL BE REMOVED. ALL CATCH BASIN SUMPS SHALL BE CLEANED.
11. CONSTRUCTION ACTIVITIES AT THE PROJECT SITE WILL RESULT IN EMISSIONS OF FUGITIVE DUST TO THE ATMOSPHERE. THE QUANTITY OF FUGITIVE DUST GENERATED WILL BE UNCONTROLLED BUT IS DEPENDENT UPON WEATHER CONDITIONS. FUGITIVE DUST PARTICLES HAVE A GREATER PROPENSITY TO BECOME AIRBORNE DURING DRY AND BREEZY METEOROLOGICAL CONDITIONS. CONSTRUCTION ACTIVITIES AT THE SITE WHICH WILL RESULT IN PILES AND CONSTRUCTION TRAFFIC. THE CONTRACTOR WILL IMPLEMENT THE FOLLOWING REASONABLE PRECAUTIONS DURING CONSTRUCTION TO MINIMIZE THE GENERATION OF FUGITIVE DUST:
    - 11.1. USE WATER FOR DUST CONTROL OF ACTIVE CONSTRUCTION AREAS, ACTIVE UNPAVED ROADS, AND OTHER SURFACES WHICH CAN FIVE RISE TO AIRBORNE DUST. A TYPICAL PRACTICE TO BE FOLLOWED DURING SITE GRADING WILL BE TO FOLLOW THE EARTH MOVING EQUIPMENT WITH A WATER TRUCK TO IMMEDIATE WET THE NEW DISTURBED AREA.
    - 11.2. APPLY SEED FOR A VEGETATIVE COVER ON STORAGE PILES, ESPECIALLY THOSE THAT WILL REMAIN DORMANT FOR AN EXTENDED PERIOD.
    - 11.3. THE CONTRACTOR MUST CLEAN/SWEEP DAILY ALL ON-SITE PAVED ROADS AND THAT PORTION OF ANY SURROUNDING ROADS WHICH ARE USED BY CONSTRUCTION TRAFFIC, FOR THE DURATION OF THE PROJECT.
    - 11.4. INSTITUTE A MAXIMUM ON SITE SPEED LIMIT OF 10 MILES PER HOUR.
    - 11.5. THE CONTRACTOR IS RESPONSIBLE FOR DUST CONTROL DURING THE CONSTRUCTION PROCESS. THE CONSTRUCTION MANAGER SHALL INSPECT THE SITE TO ASSURE DUST IS ADEQUATELY CONTROLLED. IF THE CONSTRUCTION MANAGER OR OWNERS REPRESENTATIVE FEELS DUST CONTROL MEASURES ARE NOT ADEQUATE THE CONTRACT SHALL BE REQUIRED TO INCREASE THESE MEASURES AS DIRECTED BY THE CONSTRUCTION MANAGER.
12. ALL CONSTRUCTION ACTIVITIES SHALL COMPLY WITH THE TOWN OF MONROE ZONING REGULATIONS.
13. A STORMWATER MANAGEMENT SYSTEM MAINTENANCE SCHEDULE SHALL BE IMPLEMENTED AND OFFICIALLY RECORDED BY THE INDIVIDUAL IDENTIFIED IN NOTE 8 ABOVE. THE SCHEDULE SHALL INCLUDE AS A MINIMUM:
    - 13.1. ALL ELEMENTS OF THE STORMWATER MANAGEMENT SYSTEM SHALL BE INSPECTED WEEKLY, AND AFTER ANY STORM EVENT GENERATING MORE THAN 0.5 INCHES OF RAIN.
    - 13.2. A WEEKLY INSPECTION OF THE SITE SHALL BE CONDUCTED FOR SURFACE DEBRIS.
    - 13.3. A MONTHLY INSPECTION OF ALL STORMWATER STRUCTURES AND OUTFALLS SHALL BE CONDUCTED FOR FLOATING OR SURFACE DEBRIS SEDIMENT.
    - 13.4. STRUCTURES AND OUTFALLS SHALL BE CLEANED OF SEDIMENT AND DEBRIS AT LEAST ONCE A YEAR DURING THE MONTH OF APRIL AND AT OTHER TIMES AS NECESSARY TO PREVENT THE DISCHARGE OF POLLUTANTS FROM STRUCTURES OR OUTFALLS.
    - 13.5. ALL DRIVES SHALL BE SWEPT CLEAN OF SAND, LITTER AND OTHER POSSIBLE POLLUTANTS AT LEAST TWICE A YEAR, ONCE BETWEEN NOVEMBER 14 AND DECEMBER 15 AND ONCE DURING THE MONTH OF APRIL AND AT OTHER TIMES AS DIRECTED BY THE TOWN OF MONROE.
    - 13.6. A STOCKPILE OF SEDIMENT AND EROSION CONTROLS SHALL BE KEPT ON SITE AT ALL TIMES. THIS WILL CONSIST OF AT LEAST 24 HAY BALES, UNDER COVER, EXTRA STONE FOR THE ANTI-TRACKING APRON, AT LEAST 100 FEET OF SILT FENCE AND 100 SQUARE YARDS OF NON-WOVEN FILTER FABRIC ADDITIONAL MEASURES MAY BE REQUIRED BY THE SITE MONITOR OR THE TOWN OF MONROE. THESE MEASURES ARE TO BE FATALLED BY THE REQUEST DATE.
    - 13.7. REPLACE CONSTRUCTION ENTRANCE WHEN THE CAPACITY OF THE APRON HAS REACHED THE 50% VOLUME.
14. SEDIMENT REMOVED FROM CONTROL STRUCTURES WILL BE DISPOSED OF IN A MANNER WHICH IS CONSISTENT WITH THE INTENT OF THESE PLANS.
15. WHERE CONSTRUCTION ACTIVITIES HAVE PERMANENTLY CEASED OR HAVE TEMPORARILY BEEN SUSPENDED FOR MORE THAN SEVEN DAYS, OR WHEN FINAL GRADES ARE REACHED IN ANY PORTION OF THE SITE, STABILIZATION PRACTICES SHALL BE IMPLEMENTED WITH THREE DAYS.
16. TEMPORARY FACILITIES (SWALES, CULVERTS, CHECK DAMS, ECT.) MAY BE UTILIZED AS NECESSARY TO HELP FACILITATE PROPER FUNCTIONING AND MAINTENANCE OF THE SITE.

16. CONDUCT FINE GRADING.
17. FERTILIZE SEED AND MULCH. SEED MIXTURE TO BE INSTALLED DURING THE SPRING OR FALL SEASON ONLY. USE EROSION CONTROL BLANKETS AS REQUIRED OR ORDERED FOR SLOPES GREATER THAN 3:1 AND AS SHOWN ON LANDSCAPE PLANS OR EROSION CONTROL PLANS. FOR TEMPORARY STABILIZATION BEYOND SEEDING DATES USE ANNUAL RYE AT 40 LBS/1,000 S.F. FERTILIZE WITH 10-10-10 AT 1.0 LBS. OF NITROGEN PER 1,000 S.F. AND LIME AT 100 LBS/1,000 S.F. (MAX.).
18. UPON DIRECTION OF THE TOWN OF MONROE AGENT (AFTER THEIR FINAL INSPECTIONS HAVE BEEN PERFORMED AND CERTIFICATES OF COMPLETION FOR INLAND WETLANDS AND EXCAVATION/FILLING HAVE BEEN ISSUED), EROSION AND SEDIMENT CONTROL MEASURES SHALL BE REMOVED FOLLOWING STABILIZATION OF THE SITE.

SELECT FILL REQUIREMENTS

1. SELECT FILL MATERIAL AND SELECT BACKFILL MATERIAL, PLACED WITHIN AND ADJACENT TO PROPOSED LEACHING AREAS SHALL BE COMPRISED OF CLEAN SAND AND GRAVEL, FREE OF ORGANIC MATTER AND FOREIGN SUBSTANCES. THE FILL MATERIAL SHALL MEET THE FOLLOWING REQUIREMENTS UNLESS OTHERWISE APPROVED BY A PROFESSIONAL ENGINEER FOR USE WITHIN THE LEACHING AREA:
   - A. THE FILL SHALL NOT CONTAIN ANY MATERIAL LARGER THAN (3) INCHES.
   - B. UP TO 45% OF THE DRY WEIGHT OF THE REPRESENTATIVE SAMPLE MAY BE RETAINED ON THE #4 SIEVE (THIS IS THE GRAVEL PORTION OF THE SAMPLE).
   - C. THE MATERIAL THAT PASSES THE #4 SIEVE IS THEN REWEIGHED AND THE SIEVE ANALYSIS STARTED.
   - D. THE REMAINING SAMPLE SHALL MEE THE FOLLOWING GRADATION CRITERIA:

SIEVE SIZE	PERCENT PASSING REQUIRED % PASSING WET SIEVE	PERCENT PASSING DRY SIEVE
#4	100	100
#10	70-100	70-100
#40	10-50	10-50
#100	0-20	0-5
#200	0-5	0-2.5

   - E. PERCENT PASSING THE #40 SIEVE CAN BE INCREASED TO NO GREATER THAN 75% IF THE PERCENT PASSING THE #100 SIEVE DOES NOT EXCEED 10% AND THE #200 SIEVE DOES NOT EXCEED 5%.
   - F. THE RESPONSIBILITY FOR THE PREPARATION OF A LEACHING AREA UTILIZING "SELECT MATERIAL" IS THAT OF THE LICENSED INSTALLER.
   - G. THE INSTALLER SHALL TAKE THE NECESSARY STEPS TO PROTECT THE UNDERLYING NATURALLY OCCURRING SOILS FROM OVERCOMPACTION AND SILTATION ONCE EXPOSED.
   - H. SELECT FILL SHALL BE PLACED BY A LICENSED INSTALLER.
   - I. ANY TOPSOIL WITHIN SEPTIC AREA IS TO BE REMOVED AND REPLACED WITH SELECT FILL.
   - J. FILL SHALL BE PLACED ON THE PERIMETER OF THE TRENCH AREA AND SPREAD WITH A SMALL CRAWLER, TRACTOR OR OTHER APPROVED MACHINERY.
